Product Name :
Alternative Fueled Engine

Product Code :
ENGLABINGCAG11200003

Description :

Alternative Fueled Engine

Technical Specification :

Alternative Fueled Engine patented oil-less, four stroke transparent engine can run on any alternative fuel. With the ability to vary timing or change the compression ratio, this trainer is the world's most unique teaching device.

Run it on ethanol or methanol, propane or natural gas and measure the horsepower with the electric as shown above and witness the actual combustion of different fuels. Available with or without and with or without electric start.

With an emission analyzer you can do many alt. fuels emission tests.

The ADVANCED LEVEL Program provides experiments in the areas of variable compression ratio, variable spark timing and operation with any combustible fuel.

The Alternative Fueled Engine program includes a dynamometer, which is attached to an oil-less engine allowing the student to measure the engine.

Also, this patented electric dynamometer con-verts useful power to electrical energy.

The net electrical power output is measured by a DC ammeter and volt-meter.

The program is based on Alternative Fueled Engine technology for the 21st century.
