

Product Name :
Permeability Apparatus Three Cell

Product Code :
ENGLABINGCAG360007

Description :

Permeability Apparatus Three Cell

Technical Specification :

Three Cell is available for 6, 9, 12, 18 cells.

The air pressure compressor is applied to 2 HP capacities.

The measuring cylinder of the apparatus is of 500cc for measurement of the draining water.

The pressure regulator can regulate up to 0-15 Kg/cm Square.

Note: The pressure chamber is fitted with a pressure regulator which helps in regulating the pressure from 0-15kg/cm sq. Gauge is for indicating the pressure in the cell.

A foot pump and a pressure tube is supplied to develop pressure in the chamber.

The apparatus is supplied with a measuring cylinder 500cc to measure percolated quantity to water.

It encompasses mild steel cell of the cross section in either round or square shape.

The cells are connected with the pressure chamber

The entire assembly is stood on a stand, where a T connector is mounted rubber hosepipe and sleeve packed valve.

The assembly of the cells is connected with a base plate and at the top; it is connected with the nozzles.

The pressure chamber has a regulator to control the air pressure in it.

Pressure can also be applied; by a pressure air line or by a compressor (2 HP capacity), can be supplied at an extra cost.
